

# Reset3 — Version 3, 4 & 5 Strategic Plan

Reset3 is designed as a decision-friction eliminator — not a task manager, not a habit tracker, and not a productivity dashboard. The following versions expand the product carefully while preserving its minimal philosophy.

## Version 3 — Minimal AI Integration

- AI Clarifier Mode: Refines vague primary tasks into smaller, specific, actionable steps.
- AI Compression Mode: Detects overlapping tasks in the brain dump and suggests consolidation.
- No chat interface. No conversational AI. AI serves clarity only.
- Preserves core principle: Reduce decision friction, not add cognitive load.

## Version 4 — Productization & Identity

- Refined UI identity and consistent visual language.
- Landing page explaining Reset3 philosophy clearly.
- Light onboarding (30-second explanation of how it works).
- Optional daily streak or simple consistency indicator.
- Portfolio-grade documentation for technical credibility.

## Version 5 — Lightweight SaaS Layer

- User accounts and cross-device sync.
- Simple subscription model (e.g., \$1/month entry tier).
- Secure data storage and authentication.
- Basic usage metrics (cycles per day, primaries completed).
- No feature expansion beyond core philosophy.

## Strategic Positioning (A + B + C Model)

Reset3 should function simultaneously as: • A personal decision tool used daily. • A portfolio piece demonstrating product thinking and AI integration. • A lightweight SaaS with optional monetization — never bloated, never diluted. Total recommended versions: 4–5 maximum. Beyond that risks scope creep and loss of clarity.
